

## **Student and Resident Hybrid Poster Session at the 2024 Oregon Academy of Family Physicians (OAFP) Annual Spring Meeting, Thursday, April 11, 2024, in partnership with the Oregon Rural Practice-based Research Network (ORPRN)**

### **CALL FOR POSTER ABSTRACTS FROM STUDENTS, RESIDENTS AND FELLOWS:**

Students, residents and fellows from around Oregon are invited to submit scholarly abstracts from research, quality improvement, education, workforce, practice facilitation or implementation projects. All subjects related to primary care are encouraged. Projects in progress, as well as completed projects are encouraged.

While the OAFP meeting will be held in person in Portland, OR, selected abstracts will be presented as poster slides during a HYBRID poster session on Thursday evening, April 11, 2024. Presenters can participate in-person or virtually via Zoom. Posters will be judged by a panel of researchers, physicians, primary care staff and quality improvement experts. Prizes will be awarded to the top three posters, based on clarity of presentation and scholarly rigor.

Email your abstract to [weekley@ohsu.edu](mailto:weekley@ohsu.edu) by March 1, 2024.

Selected abstracts will be notified by March 15, 2024.

Finished posters (as single PowerPoint slide) will be due by March 30, 2024.

### **Abstract Requirements**

- Limit abstract to 500 words. This does not include the title or authors.
- Type the body of the abstract as one paragraph. The abstract should be written in the third person.
- The abstract should contain the subheadings described below, as appropriate.
- The abstract should not contain charts, graphics, references, or acknowledgments.

### **Abstract Format**

**Title:** Type title in bold at the top of the abstract.

**Author(s):** List author(s) with presenter listed first.

**Institution(s):** List the schools or programs for each of the authors.

**Email:** Include the email of the presenter AND the mentor/director/faculty on the project.

**Context/background:** The abstract should begin with a sentence or two summarizing the rationale for the study or project, providing the clinical (or other) reason for the study or project. In addition, the author should give a sentence or two about the importance of this work to family medicine/primary care.

**Objective:** State the objective or study question addressed (e.g., to determine whether...). If more than one objective is addressed, the main objective should be indicated and only key secondary objectives stated.

**Methods:** Include as appropriate any of the following:

- **Design:** Describe the basic design of the study or project. Use descriptors such as randomized controlled trial, cohort, case control, survey, case series, cost-effectiveness analysis, quality improvement or qualitative study. For new analyses of existing data sets (secondary data analysis), the data set should be named and the basic study design disclosed;
- **Setting:** Describe the study setting(s) such as general community, a primary care or family medicine practice, hospital, nursing home or other facility, etc.;

- **Participants:** State the important eligibility (inclusion and exclusion) criteria and key sociodemographic features of participants. Provide numbers of participants and how they were selected;
- **Intervention/Instrument** Describe the essential features of any interventions or of any data collection instruments or surveys.

**Results:** Give the primary study outcomes, if available. Measurements that require explanation for a general medical audience should be defined. If in progress, describe the type of results you anticipate presenting. Present numbers, statistical comparisons and key data related to your findings. The results section is often the longest part of an abstract and the most important part. Note: do not interpret your findings in the results section as this belongs in the discussion/conclusion.

**Discussion/conclusions:** Summarize the key take home point of the project or study.

**Note:** For brevity, parts of the abstract should be written in phrases rather than complete sentences.
